DETAILED ACTION

1. Applicant's election without traverse of Group I invention in Paper No. 12 is acknowledged.
2. Claims 13, 14 and 16-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 12.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 9 and 10 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification on page 4 refers to a top part 23 and screw retention means 23, thus the same reference numeral is used to apparently designate two different elements. Further, the screw retention 23 is bonded , soldered or clamped into the groove 17 or 19, however this is the end that is movable into and out of the groove to engage and retain the screw, thus it is impossible to be soldered, bonded or clamped, as these terms imply **no movement which would render the spring inoperative for its claimed purpose.**

Art Unit: 3723

5. Normally a claim which fails to comply with the first and/or second paragraph of § 112 will not be analyzed as to whether it is patentable over the prior art since to do so would of necessity require speculation with regard to the metes and bounds of the claimed subject matter, **In re Steele**, 308 F.2d 859, 862-63, 134 USPQ 292, (CCPA 1962) and **In re Wilson**, 424 F.2d 1382, 1385, 496 USPQ 494, 496 (CCPA 1970).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-5, 7, 8 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsushima (768) in view of Ryder et. al..

Matsushima (768) shows the claimed invention except for the use of a lobed configuration for the spindle that forms a hexagon or the specific dimension of claim 12. Ryder et. al. suggests that a driver can have such a lobed configuration with an appropriate holding means. It would therefore be obvious to one skilled in the art at the time the invention was made to modify Matsushima (768) by using a lobed configuration because Ryder et. al. suggests the use of such a shape as one that is well known for the specific purpose of driving similarly shaped fasteners.

Further to size the spring to fit a particular need or use is obvious experimentation to determine the optimum size for any part or tool. Also to mount

Art Unit: 3723

the spring in the lobes, instead of the concave area, is a matter of choice as the end result is the same.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James G. Smith whose telephone number is 703-308-1746. The examiner can normally be reached on M-Th (7:05- 4:35) first Fri. off.
